

ORDERING FOIL CARDS FROM ACI

Foil pressed cards are printed in two stages. First the printer will print everything except the foil areas. Next, the printer will stamp on the foil areas of the card. For this reason, you will be uploading two files for the front of your card when placing your order – a “foil area” file and a file for printing everything else.

IMPORTANT: Foil can only be added to one side of the card.

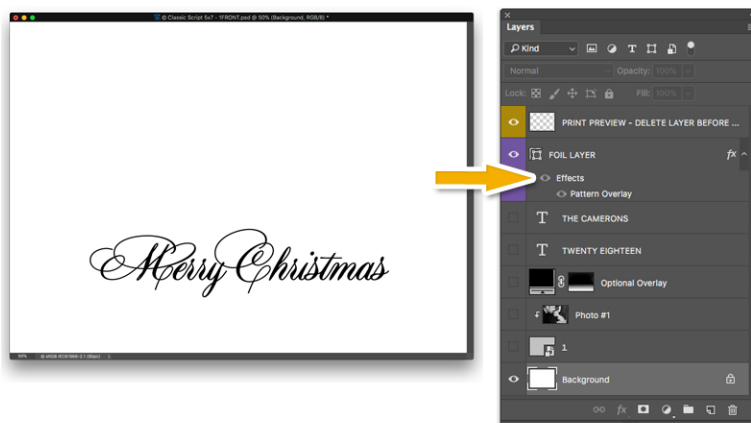

1

Click the “eyeball” on the left side of any purple “FOIL” layers to turn them off.

Save a JPG of your card.

2

Turn your FOIL layer(s) back on, then turn off all other layers except for the foil layer(s) and the white Background layer.

***You will also need to click on the “eyeball” next to “Effects” to turn off the “foil look” (see arrow) – the printable foil area **must be submitted to the printer in BLACK**. Save a JPG again, adding the word “Foil” to the file name. You will upload both of these files to the printer.
